

iOS SmartWorker Install Guide

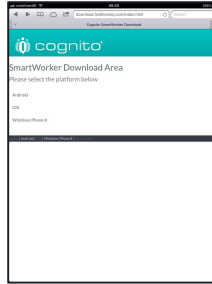

This guide has been produced to illustrate the Cognito SmartWorker (v1.0.0+) installation process for an Android device. Please note that an iPad Mini was used for illustration purposes and some screens may differ from those shown.

Pre-requisites:

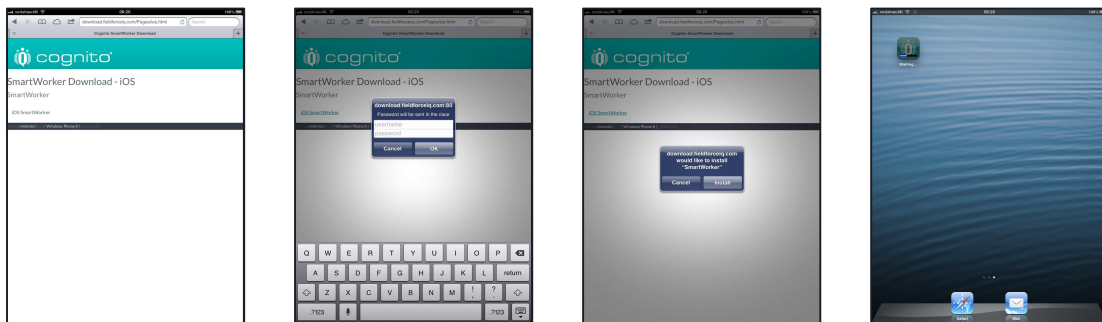

- Only Cognito can provide valid registration keys, do not re-use keys.
- The device must have a good active Internet connection. If used on a corporate Wi-Fi, ensure proxies and firewalls are not blocking access.

Installation:

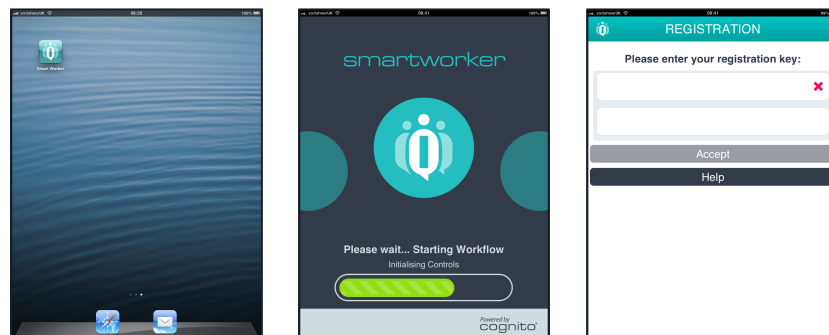

1. Obtaining the software – On the mobile device, access the SmartWorker download area using the link provided by Cognito.

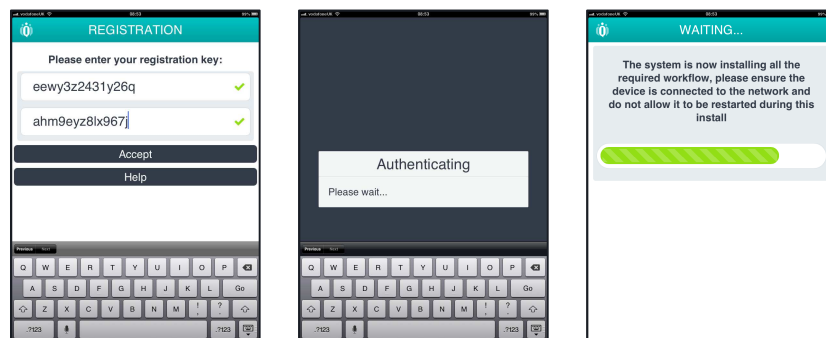

2. iOS SmartWorker – select iOS SmartWorker to begin the download, once the download is complete, select the completed download notification to begin the installation process.

3. SmartWorker Registration - Once installed the SmartWorker application will appear in the application list on the device. Selecting SmartWorker will open the application and request the Registration Key (provided by Cognito). During this process SmartWorker will also be added to the home screen.

4. Authentication - Use the on-screen keyboard, or copy and paste function of the device, to enter the Registration Key provided by Cognito. Selecting Accept will begin the authentication and profiling process.

5. Installation of Intelligent Workflow – Once the workflow and lookup lists have been downloaded and installed the Logon screen will be displayed. The application is now ready for use.
